

GEOGRAPHIC KEYS

Linking People to Places

Unique Property Reference Numbers (UPRNs) link many, different datasets to just one reference point – location.

Adding the UPRN to other datasets can help make deeper sense of data once its all linked together.

Every property in Great Britain has a UPRN, and Ordnance Survey gives it an exact location. This accurate and consistent geospatial reference system links people across multiple services, enabling data analytics and unlocking predictive insights that underpin policy making.
