BRINGING HISTORIC MAPS TO A NEW AUDIENCE

Dudley's comprehensive digital historic map archive is of great interest to hobby genealogists, history buffs and home owners. With over 5000 visitors a year viewing historic maps, the team at Dudley wanted to make it easier for users to compare maps from different eras or map providers.

Data overview

Updating Ordnance Survey data

Astun Data Services feeds the latest pre-styled Ordnance Survey data directly to iShare.

Compliant data sharing

Dudley's users can select from a number of historic mapping and airphoto layers including:

- Roper maps from c1855
- Pre-1950 County Series maps
- Post-1950 OS National Grid maps
- Several interpretive maps spanning from c1307 to c1985

iShare automatically displays the correct copyright statements.

Getting started

Users can search by full address or postcode.

The map view defaults to the latest pre-styled Ordnance Survey mapping on the left and the latest aerial photography on the right.

Changing datasets

Users can change map layers in just a few clicks.

About iShare

iShare is our end-to-end Enterprise GIS. It comprises a Spatial Data Warehouse, a browser-based GIS, an award-winning public facing mapping application and an API.

Mirrored panning and zoom

One set of controls operates both map windows so users can be sure that they are comparing like with like.
